Dear Ms. Dixon,

1 I'm writing to let you know that I think the DEIS on Yucca Mountain is unacceptable and should be completely rewritten.

The DEIS is confusing and redundant and therefore extremely difficult for interested parties to comprehend and navigate.

3 The DEIS should clearly and accurately explain the risks involved along the transportation routes. It should also use the most current information to do so. It should also include site-specific data to show the effects of accidents in populated areas.

2 In order to achieve true environmental justice, the DOE should identify all the minority and low-income communities that could potentially be affected and then check to see what negative impacts to these communities there may be, in proportion to other communities.

Thank you,
Aimee Marciniak
