Wendy,

1 I think that transporting nuclear waste as far as it will be trasported is a stupid idea. It isn't even safe to trasport coal. Recently a 15year old boy was killed when a train carring coal derailed. His mother was also badly hurt. If a train carring coal can harm people this bad, imagine what a train with nuclear waste could do! I think that this is a really bad idea. Thank You for taking the time to read this letter.
