EIS001432

To Whom it may Concern;

1... I want to go on record against the shipment of Nuclear Waste by Train for the next 30 yrs!

Are you trying to destroy the people and areas thru which these trains will travel? That would sure be a handy way to destroy millions of people, and comunities very easily without even dropping a bomb! There are so many accidents killing people by trains right now. I live about 300 ft from the train tracks, for 5 years now, and there have been 3 fatalities - plus many close calls 1 block from my home. These are not run down old houses we live in, but new homes in the $150,000.00's of dollars.

These trains travel thru this area, especially late at nite & early morning, at speeds of around 50 miles an hour over the limit for passing thru populated areas! Just last week we had a train plow into somebody & there were 2 full trains stalled on the tracks for 4 hours - before they moved.

Does this sound like a good situation to add Nuclear Waste everyday on these trains? It's a pitifull situation that our government has more concerns over foreign countries, than it

1 cont ... has for it's own citizens!

EIS001432

Of course, this would be a fast way of killing off the surplus of overpopulation would'nt it?

Just knock off a couple of states with several accidents - who will miss them?

2 Bury the Nuclear Rods in earthquake & flood secured concrete bunkers at the point of origin!

1 cont Now that you have created this Monster, what are you going to do with the resulting wastes?

You know there is no way you can ship all this hazardous material by train & trucks without certain diasters occuring.

The highways, with all the trucks are a toss up of life & death, without adding this to them.

Don't worry about enemys destroying our country - there doing a good job of it all by themself!

Yours Truly,

Marion Walter
