As you know, any radioactive waste is dangerous -
1 [Movement to any site incurs danger to whoever ~~or~~ is near the route used. I oppose shipment to the Yucca Mountain site by any route and also the high concentration of the waste in any one site.]

2 [I would suggest that each state select ~~a~~ single site already contaminated by radioactive waste and store all waste that exists or is being produced in the state in large above ground containers which can constantly be monitored for leakage. If 2 or more states wish to consolidate their waste in a single location that would be subject to the Dept. of Energy approval.

The above plan would mean we are no worse off than we are now. We would have less danger in smaller distances of collection — better protection with the above ground storage and monitoring.]

Yours truly
Alice Donaldson

The Yucca Mt. Site could be used by one or more Western states.
