Dear Ms Dixon:

I am very concerned about the hazards that would be imposed on Americans across the country by shipping lethal radioactive nuclear waste by train to an area that has not been declared free of seismic disturbance.

1

Imagine the liklihood of every other "accident" in shipping every day for 30 years.

My father, my husband and two

2 continued

Your sons went into the armed services in three wars to help keep Americans free of the disaster of seeing our country war torn. For what? So that the country and its people will be threatened by disaster every other day for 30 years. No! We can't let it happen to our children, their children and their children. What kind of thoughtless leadership wrought this plan forward.

I implore the OCRWM to reconsider and respond with a disposal plan that would minimize danger to all of our communities. And put our nuclear scientists to the task of rendering this waste harmless.

Thank you for your attention

Lois J. Rychlewski
(Mrs Walter J. Rychlewski)
