North Las Vegas, NV 89036-0307

Dear Ms. Dixon, EIS manager:

My class and I have been studying about nuclear energy. We have also been talking about the nuclear storage facility in Yucca Mt.

1 I don't think you should store it there.
2 You should let the people that make the
3 waste take care of it themselves. You shouldn't let the trucks go through Vegas because, if they leaked, people can get very sick and it could contaminate our water.

If it contaminates the water supply, a lot of people could get medical side effects. They could get cancer or their kids could get mutated. The water and other things that can be

3 contaminated would be contaminated
we couldn't drink it for a long tim as
we couldn't live without it. I don't think
it is right to put even little kids at risk
of getting hurt from the trucks leaking.
I don't think the trucks should go through
1 Vegas and I don't think you should
store the nuclear waste at Yucca
Mt.

sincerely
Dustin Bardeaux
