Yucca Mountain Project,

From the beginning of the controversy of nuclear waste I have been against dumping the waste in Nevada. I have never been convinced its a "safe" disposal or the transporting of it through many states and my own state. There are many mutations of accidents on many various transporting.

My desires are important as I am a resident of 58 years in Las Vegas and was here during all the atomic tests in the 50's. Today many people are having effects from these.

I definitely believe enough research has done nothing to prove this "dumping" ground safe. It is unfair to use my state for all other states dumping. Let them keep their own.

Sincerely,

Ann Underwood
