Department of Energy,

I am a very Concerned Citizen of the United States living in Las Vegas. I am Concerned about the Yucca Mountain project. No one here wants this toxic waste here. This is the fun Capital of the world why would you want to put this Contamination here? I know you think these Containers are safe but let me tell you one quake & I don't Care what they are in they will leak. I had the experience in Niagara Falls N.Y. with the Love Canal they were sure they were safe too but they leaked & Contaminated our soil, water & air. This is nothing to fool around with. I'm sure you all have Children or grandchildren, would you like them exposed to that? Niagara Falls had a population of 138,000 people now it's down to 45,000? Does that tell you something? The lucky people got out I don't have to say more you Can figure it out. Those trucks with the Chemical waste goes through our City past our schools. What if some were to leak our children would really be affected & everyone else. Please reconsider the location of this Waste I beg you before its too late. When there is seepage it travels for miles. I feel I have the right to say this and I am speaking for a lot more people.

Please think about it.
I would very much appreciate it.
Sincerely
Yours
Gary Cristelli
