Carol Hanlon — 9-18-01

Yucca Mountain is a geologically unstable area. It also lies above an aquifer. A lot of people live not far away.

There is no safe scenario for transporting nuclear waste. A EIS has not been released.

That waste should be permanently stored where it is. The nuclear plants should be shut down. Great savings in energy can be made by improved efficiency. Wind and sun power are increasingly useful.

Please don't store nuclear waste at Yucca Mtn. Thank you.
