Carol Hanlon, DOE

Hearings on the PSSE report should be postponed to give people time to study this very long report.

There are so many reasons why the fuel rods should not be transported to Yucca Mt. Here are a few: geologic faults in the area; it violates the Treaty of Ruby Valley with the Western Shoshone Nation; the transportation of these wastes will pass through 43 states and affecting many Americans along the routes; geothermal hot water in area; contamination of groundwater.

Please take these comments under consideration. These fuel rods should be left where they are or should be recycled.

Sincerely,

Evelyn M. Richards
