Comments: (If possible, please reference section and/or page number in document if applicable.)

Yucca Mountain is of great concern to citizens of Nevada. I believe that more studies +/or contingency plans need to be looked at. This type of radioactive waste is so unstable. I think every citizen of the U.S. should be concerned about this with regards to the transportation of this waste. Chernobyl could look like a picnic. What would happen if this quantity/type of radioactive crud if it was released into the atmosphere or used in some kind of attack?

I also think more ground water studies need to be done. Nevada has contributed so much to further the government's nuclear programs/agenda. This would be a small contribution to the locals peace of mind. There are earthquakes here you know. I know radioactive waste is a serious problem, and there is no stopping the reality of Yucca Mountain (SADLY) but I just think the REALITY of some of this RADIOACTIVE CRUD escaping into the environment needs to be addressed. MAYBE not many people live here in Nevada but there are many populated areas near here. The government has a wonderful opportunity here (as the biggest land holder) Nevada is NOT A GIANT ASHTRAY!!!

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible, then secure with tape.

P.S. Is it true RADIOACTIVE CRUD FROM ALL over the world is going to be dumped here?
