NOV 15, 2007

Gentelmen,

As a concern citizen of Caliente I have heard and read many things about the issue of Nuclear Waste.

1 [I feel it would be beneficial to transport and Store Nuclear Waste in one secure location.
Yucca Mountain is that place.
Having been tested and developed for storing spent Nuclear Fuel, the transportation to Yucca Mountain should proceed. Over the past thirty years twenty Seven Hundred shipments have been safely completed by both Goverment and Industry.
World Wide, over the last Twenty-Five years more then Seventy-Thousand Metric Tons of Uranium has been shiped in about Twenty-Thousand casks.]

2 [The Caliente Corridor would be beneficial to to the City of Caliente,

This Billion Dollar project gives opportunity to Nevada's Economy.]

3 [The shipments that will travel through or near Caliente should have the best in emergency response, equipment, training facilities, and transportation Center, rail maintenance yard and cost maintenance facitities, and other special needed infastructure would be appropriate.]

4 [The DOE should choose the old Caliente to Pioche railroad line and not the eccles option. The Eccles option would put the railroad right through the middle of acreage designated by Lincoln County. This land would be for future growth to the County.
The old railroad route would not

5 effect this.] [The DOE has plans to build a railyard close to Caliente. The two options are the Cove option and the upland option.

The Cove option would be more functional for the operations as it is close to the main line.]

6 [The construction of this railroad through the Nevada's lands would displace some people. These people and property owners should be compensated. This process should guarantee fair and adequate compensation.]

Some say Nevada is not a Waste Land, I feel this would not be the case even with Nuclear Waste will be transported and stored in a secure facility.

Sincerely,

Roanne Moore
