re: Comments for the Supplemental Yucca Mountain Repository, Nevada Rail Corridor and draft Rail Alignment EIS

Hi OCRWM,

Please include these comments in the above referenced documents. I waited until the last minute (last night - 11:50pm...) & was unable to fax these from home. I was so upset!!

Thank you for allowing me to submit these comments. They mean a lot to me for some reason? Thanks!!

Holly

1. [please consider using the Yucca Mountain Project (YMP) to encourage awareness of regional sustainability. Nuclear waste transportation and disposal are part of a whole package of risks associated with modern living. The take home lesson from the YMP is that we need to do better as a nation and world to conserve energy and address exponential demand for energy. YMP is part of a system that meets this energy demand. It is more than just a NotIN My Backyard issue.

Clark County, Nevada would be the perfect place for the Depart ment of Energy and all the various Federal, State, local, regional, etc... agencies to get together, cut through the politics and discuss sustainable development. What better environmental issue to act as a catalyst for Change than the YMP? Some people think that humans might not even be around in 10,000 years, but the paiutes have been in this area for 10,000 years or more according to Grayson (For your information?).

Anyway, a great way to build trust in the government and have better environmental decisions is with proactive public outreach and stakeholder involvement. Think about it?] Thank you.
