

NOV 04 1999

6 MR. DORAME: Mr. Michael Dorame. Thank you very
7 much. Michael Dorame, Inyo County Fifth District
8 Supervisor.

1 9 The only question that I pose right now is
10 when we talk about the NRC's water standard and the EPA
11 water standard, that sort of leaves everybody with the sort
12 of lukewarm feeling, because initially when there was
13 discussion about a repository, we were talking about total
14 isolation from anything outside of the repository, even the
15 groundwater and everything.

16 So the difficulty that people have been
17 posing to me in their minds about a groundwater quality
18 standard is that, So if you find indication that it has
19 leaked into the aquifer, what's a standard going to do for
20 you other than zero tolerance standard? And even at that,
21 if you have a zero tolerance standard and it gets into the
22 aquifer, how do you turn it off? What's the plan?

23 Thank you.

24 MR. SKIPPER: Thank you for your time.

25 THE FACILITATOR: Other comments at this time?

1

1

Yes.
