Dear Ms. Dixon,

FEB 08 2000

The students of my Environmental Science wanted to write to you voicing their opinions on the transportation and storage of nuclear waste at the Yucca Mountain repository. Enclosed you will find their letters.

1  I personally would like to say that it does seem like a horrid idea to transport toxins across the country, when we know that accidents will happen. Could you at least dispel some of our fright by sending us information on the plan to contain and recollect these nuclear wastes when an accident happens?

In addition, I have to acknowledge that I cannot imagine the nuclear wastes you are <sup>proposing to</sup> storing will be safe forever, however I am comforted to know that we will not be here forever either.

Sincerely,

Sarah Ziske
