Yucca Mountain Response

EIS001250

1... From various sources I have gathered a substantial amount of knowledge concerning the Yucca Mountain Project. From this information I believe that the project is generally a good idea. One of the reasons that I am not against the project, is because are current method of storing is simply not as good as the Yucca Mountain Project would be. Another characteristic that I like about the project is that it will be done in a rather low population area. One of the things that reassures me about the entire process is that extensive testing has been done, and from this testing, as of now, the area appears to be a very good location.

2 Although I am for the Yucca Mountain Project as a whole, there are a few aspects that do worry me. One of these aspects that worries me is that the Nuclear Waste will me traveling through major cities and other highly populated areas throughout the country.

3 The one other thing that I am concerned about is a substantial problem occurring at Yucca Mountain, possibly something similar to a meltdown at a nuclear power plant.

1 cont. There are both good things and bad things about the Yucca Mountain Project, but I believe that the good things out way the bad things; therefore, I believe that we should go ahead with this project.

Sincerely,

Elliott M. Bacon
