Comments: (If possible, please reference section number and/or page number in document if applicable.)

1 Throughout the "coverage" of the Yucca Mountain site characterization there has not been any discussion about the route locations through which the waste will travel. Which communities will it be shipped through and under what conditions? Are there two-lane roads which are used? Stop-lights? Freeways? Etc.

2 If the worst happened and there were a major accident on the highway (a distinct possibility since there are supposed to be two shipments a day every day for the next 39 years) who would be responsible for the cleanup ^{and damages}. And most importantly who would be billed for the cleanup and damages? The nuclear energy or the taxpayers?

These are the questions which I believe should be asked and around which the debate should be framed.

Please note: For your comment(s) to be considered in the Final Environmental Impact Statement, your comment(s) need to be received by the Department of Energy by February 9, 2000. To the extent practicable the Department will consider comments received after February 9.

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible; then secure with tape.
