Comments: (If possible, please reference section number and/or page number in document if applicable.)

1 | 1) Nuclear power plants should be shut down  
to stop creating more high-level radioactive  
waste until a safe plan is adopted by our  
elected representatives.

2 | 2) High level radioactive waste should be permanently  
entombed @ the creation site. Each nuclear facility  
should develop long-term storage for the high-level  
radioactive waste they generate. This way the high  
risk of traffic accidents is eliminated & any  
other accident would be localized.

3 | 3) Transporting the high-level radioactive waste has too many unresolved  
problems- container testing doesn't realistically re-create potential  
traffic accidents community readiness in case of containment breach is  
non-existent, & the possibility of terrorist strikes is too great.

Please note: For your comment(s) to be considered in the Final Environmental Impact Statement, your comment(s) need to be received by the Department of Energy by February 9, 2000. To the extent practicable the Department will consider comments received after February 9.

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible; then secure with tape.
