EIS002080

1 MR. CHARLES: My name is Jerry Charles of the Ely Shoshone Tribe. The tribe is opposed of this  
2 project. I have a couple of comments on EIS. EIS should evaluate mismanagement, contributions of  
3 alternate methods, warning future generations of hazardous nature of materials located within the  
repository. The draft EIS does not consider risk management benefits or cost of alternate methods for  
warning future generations. The draft EIS failed to consider transportation impacts on specific Native  
American communities located within proximity to the potential spent nuclear fuel and high-level  
radioactive waste. In particular, there is no evaluation of possible impacts to Native American Tribes  
which are located in the proximity to the U.S. interstate route.

Thank you.
