--> Comment Text :  
This is an input to the document that is requested from the public at large relative to the YMP.

1 No one wants a storage dump in their "own back yard", however, for the nation where is a better place than a remote desert location. It is time for the people to look at the best interest of the nation than the held notion of put it some place else. The high-level radioactive waste was produced to better enhance the nation and the residue/waste must be stored in a place common to all states that is best suited to safely handle this bulk.

I believe the YMP should proceed on with the thought that this location is the best compromise and should be used for this purpose.
