---> Comment Text :

1 [ Yucca Mountain should not be completed until all nuclear power plants are shut down. The necessity for climate stability in the region is unattainable, especially with human impacts on climate associated with global warming. Further, governments, languages, written symbols do not last nearly the half life of this lethal waste. Forcing this deadly repository on the few people of Nevada simply because of their weakness politically is wrong. Transport of nuclear waste on our roads from its current locations to Yucca Mountain is not acceptable. Once all the nuclear power plants are shut down, then we must burry this stuff with the best science possible. Until then, there should be no permanent waste site. The solution to our energy needs does not lie with this deadly process, contrary to Bush and Cheney. If and when this site is opened, the possibility of water near the casks must be much improved over a wide range of external climates. Stop Yucca Mountain NOW. It is not acceptable to leak into local aquifers, e ]
