1 [I urge you not to approve Yucca Mountain as a storage site for high-level nuclear waste. Keep in mind that nuclear waste is not disposable, and its detrimental effects on the environment will linger long into the future, when it will be too late to compensate for our current actions. Since this area is at high risk for earthquakes, this waste will sooner or later be deposited underground, contaminating the soil and even the groundwater. The decisions we make today will effect many future generations and we should consider their environmental impact above all other factors.]
