Comments: After having read many articles over the years, I believe the Yucca Mountain storage issue, including the transportation dangers, the inability to safeguard the site for the required 10,000 years, and the costs of feasibility studies alone (which outprice the advantage of "cheap" nuclear energy), I see this debacle as the number one reason to stop producing nuclear energy in this country.

I have been shocked to hear Vice-President Cheney calling for more nuclear power at a time when wind turbines have become more efficient, Americans are responding favorably to solar power (especially when offered minimal tax incentives) and conservation, and endless energy and conservation technologies are being explored in the rest of the world.

I am sure that excellent work has been done to study and implement a waste storage site at Yucca. It does not hold a candle to the actual, uncontrollable dangers of nuclear waste.

Sincerely,

Dorothy Williams
