--> Comment Text :

Please recommend to the President the site be developed. I recommend that Yucca Mountain be developed as a repository for spent nuclear fuel and high level radioactive waste. A fast track to accomplish this should be set up. In particular, it is much easier to defend one site, underground, than many sites against terrorist attack. This site has been well evaluated as being as adequate as possible. In the long term the site selection can be changed if necessary, as additional sites can be studied. TIME is important NOW.

Science is changing every day at a pace such that the future cannot be predicted perfectly. New methods will materialize to improve long term storage.
