Secretary of Energy Spencer Abraham
U.S. Department of Energy
1000 Independence Ave. SW
Washington, D.C. 20585

Sir,

I am sure there must be some procedure or protocol to present an idea but I have been unable to finding one. Since the news state there is an energy crisis, I felt there was urgent need for the solution to serious problem of hazardous waste of Nuclear Waste.

I address this to three separate offices in hopes that at less one will take it serious enough to check on the suggestion.

My name is Charles C. Rozier, a retired civil servant from Warner Robins ALC, Warner Robins, Ga. 114 Julie Lane, Forsyth, Ga., 31029.

My suggestion is to bury the waste on site. Not in a shallow pit, but in deep wells, like those drilled for oil.

A friend once told me for every 10 oil wells drilled only 3 wells produced. That was part of the reason it was so expensive to find oil. 7 wells would be dry.

7 wells could used to bury toxic, biological, hazardous, and other waste. I think Nuclear waste should be buried where it is manufactured, eliminating transporting and add security. This could also be applied to mining and other manufacturing companies that produces waste.

Thank You, Charles C. Rozier
