--> Comment Text :
The Secretary of Energy should recommend that Yucca Mountain be developed as a geologic repository for high level nuclear waste. Exhaustive scientific evidence has shown that the site is suitable as a long term repository.

The present scattered storage of high level waste containers above ground at various nuclear sites is an unacceptable long term situation that can be resolved by aggressively pursuing the development of the Yucca Mountain site. This should have the highest national priority in view of the events of September 11.
