Subject: Possible Site Recommendation for Yucca Mountain

**Part of Records Package / Supplement / Correction**

Please do not recommend this site. The possibility for accidents during transport are reason enough to stop projects designed to move waste elsewhere. Best plan: stop making such toxic stuff. Also, Yucca Mountain's geography sounds like a less-than perfect situation. Isn't it likely the waste could, over time, end up seeping into the earth there and entering ground water?

Thank you for accepting my comments.
